

# Klein–Nishina angular weighting · optional extension

*Optional Klein–Nishina extension*

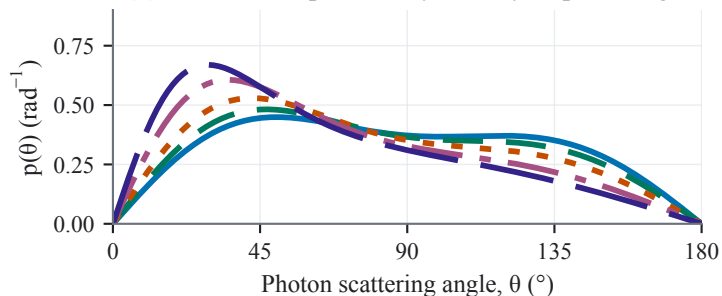

Free, stationary, unpolarized electron model · the official kinematic curves remain exact and unweighted

50 keV · solid    100 keV · dashed    200 keV · dotted    500 keV · dash-dot    1000 keV · long dash

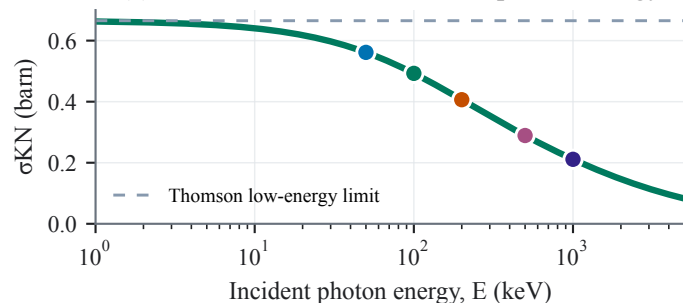

(a) Differential strength relative to forward scattering

(b) Normalized probability density in polar angle

(c) Total cross-section falls with photon energy

$p(\theta)$  includes the  $2\pi \sin\theta$  solid-angle factor and integrates to one. · Binding, attenuation, detector response and multiple scattering are outside scope.
